# 

### Resin-Molded Chip, Standard Tantalum J-Lead

#### **FEATURES**

- Compliant to the RoHS2 directive 2011/65/EU
- SMD J-lead

### APPLICATIONS

• Low power DC/DC

#### **CASE DIMENSIONS:** millimeters (inches)

Code	EIA Code	EIA Metric	L	W <sub>1</sub>	W <sub>2</sub>	Н	s

#### **HOW TO ORDER**

#### **TECHNICAL SPECIFICATIONS**

Category Temperature Range:	-55 to +125°C				
Rated Temperature:	+85°C				
Capacitance Tolerance:	±20%, ±10% at 120Hz				
Dissipation Factor:	Refer to next page				
ESR 100kHz:	Refer to next page				
Leakage Current:	After 1 minute's application of rated voltage, leakage current at 20°C				
	is not more than 0.01CV or 0.5μA, whichever is greater.				
	After 1 minute's application of rated voltage, leakage current at 85°C				
	is not more than 0.1CV or 5μA, whichever is greater.				
	After 1 minute's application of derated voltage, leakage current at 125°C				
	is not more than 0.125CV or 6.3µA, whichever is greater.				
Capacitance Change By Temperature	+15% Max. at +125°C				
	+10% Max. at +85°C				
	-10% Max. at -55°C

 $<sup>^{\</sup>star}$  In case of capacitance tolerance  $\pm$  10% type, "K" will be put at 9th digit of type numbering system Moisture Sensitivity Level (MSL) is defined according to J-STD-020.

# Resin-Molded Chip, Standard Tantalum J-Lead

#### **QUALIFICATION TABLE**

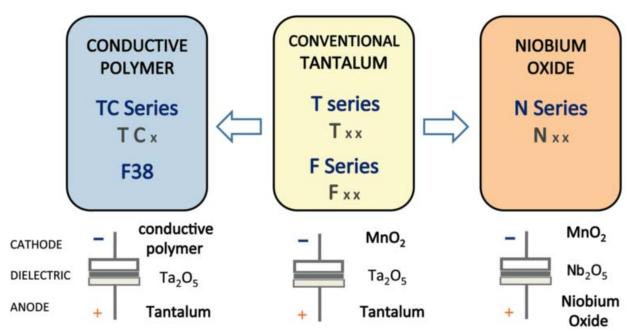

TEST	F93 series (Temperature range -55°C to +125°C)							
IESI	Condition							
Damp Heat (Steady State)	At 40°C, 90 to 95% R.H., 500 hours (No voltage applied) Capacitance Change							
Temperature Cycles	-55°C / +125°C, 30 minutes each, 5 cycles Capacitance Change							
Resistance to Soldering Heat	10 seconds reflow at 260°C, 5 seconds immersion at 260°C. Capacitance Change							
Surge	After application of surge voltage in series with a 33Ω resistor at the rate of 30 seconds ON, 30 seconds OFF, for 1000 successive test cycles at 85°C, capacitors shall meet the characteristic requirements in the table above. Capacitance Change							
Endurance	After 2000 hours' application of rated voltage in series with a 3Ω resistor at 85°C, or derated voltage in series with a 3Ω resistor at 125°C, capacitors shall meet the characteristic requirements in the table above.  Capacitance Change							
Shear Test	After applying the pressure load of 5N for 10±1 seconds horizontally to the center of capacitor side body which has no electrode and has been soldered beforehand on a substrate, there shall be found neither exfoliation nor its sign at the terminal electrode.							
Terminal Strength	Keeping a capacitor surface-mounted on a substrate upside down and supporting the substrate at both of the opposite bottom points 45mm apart from the center of capacitor, the pressure strength is applied with a specified jig at the center of substrate so that the substrate may bend by 1mm as illustrated. Then, there shall be found no remarkable abnormality on the capacitor terminals.							
Failure Rate	1% per 1000 hours at 85°C, VR with 0.1Ω/V series impedance, 60% confidence level.							

We can supply the type of compliance to AEC-Q200. Please contact to your local AVX sales office when these series are being designed in your application.
